PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/711,395	<b>Applicant(s)</b> SPERANZA ET AL.	
	<b>Examiner</b> LORE RAMILLANO	<b>Art Unit</b> 1797	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 12/10/07.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 10-13, 15-18 and 28-31 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 10-13, 15-18, and 28-31 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 9/16/04 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/10/07 has been entered.

### ***Status of Claims***

2. In Applicant's reply filed on 12/10/07, applicant amended claims 10 and 28. Claims 10-13, 15-18, and 28-31 are pending and under examination.

### ***Response to Amendment***

#### ***Claim Objections***

3. The objection to claims 1 and 16 are withdrawn.

#### ***Prior art rejections***

4. In light of applicant's amendments, the rejections over the prior art are withdrawn. New rejections follow.

#### ***Claim Rejections - 35 USC § 103***

5. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

6. **Claims 10-13, 15-18, and 28-31** are rejected under 35 U.S.C. 103(a) as being unpatentable over Harada (US Pub. No. 2003/0141200) in view of Brosnihan et al. ("Brosnihan," US 2003/0090164) and Gajjar et al. ("Gajjar," US 4891629).

In figures 9 and 13, Harada discloses a system for maintaining hydrogen purity in an electrical generator, the system comprising: a hydrogen generator (i.e. 201) having means for disassociating water into hydrogen and oxygen gas (i.e. PEM, [0101]); an electrical generator (i.e. 261) coupled to said hydrogen generator (i.e. 201) by a conduit (figure 13 shows conduit between 201 and 261); a vent line (i.e. vent line coupled to 259) having a first and second end, said first end being fluidly coupled to said electrical generator and said second end being fluidly coupled to the atmosphere (i.e. from 261 to 259); a valve (i.e. 258) coupled to said vent line (i.e. from 261 to 259); a purity monitor (i.e. 235) operably coupled to said generator (i.e. 261) and said valve (i.e. 258), said purity monitor including means for transmitting a signal to said valve (i.e. [0239]); and, a pressure transducer (i.e. 270) fluidly coupled to said conduit, said pressure transducer transmitting a signal to said hydrogen generator in response to the gas pressure in said electrical generator falling below a first threshold wherein said hydrogen generator produces hydrogen gas in response to said pressure transducer signal (i.e. [0225]-[0229]).

Harada further discloses the following: the valve operates to release hydrogen gas from said electrical generator to the atmosphere in response to a signal from said purity monitor (i.e. 258, [0201]); the hydrogen generator is configured to generate hydrogen gas at a second threshold pressure, said hydrogen generator producing hydrogen gas in response to a reduction in pressure in said electrical generator (i.e. 201, [0201]); the hydrogen generator is an electrochemical generator having at least one polymer electrode membrane (i.e. [0101]); a pressure monitor (i.e. 254); and a hydrogen purifier (i.e. 233) coupled to said generator (i.e. 261) and provides a signal to the valve when the purity of hydrogen gas in the electrical generator is less than 95% or 99% pure.

Harada does not specifically disclose a hydrogen cooled generator fluidly coupled to receive hydrogen gas from the hydrogen generator.

Brosnihan discloses a system comprising a hydrogen cooled electrical generator (70), which is fluidly coupled to receive hydrogen gas from a hydrogen supply (104); a valve (i.e. solenoid valve), which may be operated to release hydrogen cooling gas from the electrical generator in response to a signal from the purity monitor [0024]); a purity monitor (hydrogen gas purity monitoring module, 20, Figs. 2 and 3); a pressure monitor [0027]-[0028]; a hydrogen purifier (hydrogen gas purity monitoring module monitors hydrogen cooling gas to optimize purity levels, [0020]-[0021]); and a signal is provided by the purity monitor when the purity of the hydrogen gas is lowered [0020]-[0021].

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to modify Harada's system by substituting his electrical generator for a hydrogen cooled electrical generator and fluidly coupling it to his hydrogen generator since it would improve production and be more cost-efficient since Harada's system already comprises a hydrogen generator.

The modified Harada does not specifically disclose having a hydrogen cooled electrical generator coupled to a turbine.

Gajjar discloses a binary gas analyzer instrument and analysis method for determining percent composition of a cooling gas within a turbine generator. The instrument includes a measurement block having a plurality of cells therein, some of which comprise sealed cells containing a known reference gas. (i.e. Abstract). It would have been obvious to a person of ordinary skill in the art to modify the modified Harada by coupling the hydrogen cooled

Art Unit: 1797

electrical generator to a turbine because turbine driven electrical generators have been used in the industry for many years for hydrogen cooling, and thus it would be cost-efficient to incorporate a turbine to generate electricity from the hydrogen cooled electrical generator.

***Response to Arguments***

7. Applicant's arguments with respect to claims 10-13, 15-18 and 28-31 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LORE RAMILLANO whose telephone number is (571) 272-7420. The examiner can normally be reached on Mon. to Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
